# WILAméd Patient Interfaces – for Critical & Alternate Care Application

Clinical outcome in non-invasive ventilation improves significantly with the quality of the patient interface. The right choice of the patient interface is key to the patient's compliance to therapy. WILAméd is offering a comprehensive range of comfortable – and disposable non-invasive ventilation interfaces, providing both, patient and caregiver with safe and easy-to-use solutions in intensive- and alternate care environments and are compatible with all non-invasive ventilators.

Our new line of patient interfaces consists of the following ranges

## INTENSA, disposable full face masks

WILAméd's **INTENSA** nasal- and full face masks ensure a tight seal, perfect fit, without compromising comfort, even for the most sensitive patients.

## Oxi.Plus™, disposable hi-flow nasal cannula

The **WILAméd Oxi.Plus™** high flow nasal cannula is especially designed for increasingly popular high-flow-oxygen-therapy (HFOT). It is designed to deliver constant levels of oxygen to a maximum flow of 60 L/min.

Patient In

# Order Information
